## Explanatory Notes on Main Statistical Indicators

**Industrial Production Indices** are classified according to tabulation categories, division and combination of division of the revised version of the International Standard Industrial Classification of All Economic Activities (ISIC) for mining, manufacturing and electricity, gas and water, excluding construction. The indices indicate trends in value added in constant US dollars. Each series is compiled by use of the Laspeyres. The base year is 2010.

salaries;(b)remuneration for time not worked; (c)bonuses and gratuities;(d)housing allowances and family allowances paid directly by the employer, and (e)payments in kind.

**Output** The measure of output normally used in the tables is the census concept that covers only activities of an industrial nature. it include:(a)the value of all products of the establishment; (b)the net change between the beginning and the end of the reference period in the value of work in progress and stocks of goods to be shipped in the same condition as received;(c)the value of industrial work done or industrial services rendered to others; (d)the value of goods shipped in the same condition as received less the amount paid for these goods; and(e)the value of fixed assets produced during the period by the unit for its own use. In the case of estimates compiled on a shipment basis, the net change in the value of stocks of finished goods between the beginning and the end of the reference period is also included.
